AAY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing with increased PHSP expression/activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New human phosphorylation effectors useful for the diagnosis, treatment and prevention of proliferative, immune and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Lal P, Tang YT, Corley NC, Guegler KJ, Baughn MR;

This sequence is an example of a cyclic peptides (I) of the invention, which has: (a) an amphipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological pH; and (c) at least one basic amino acid (aa) in LR or TR. (I) are broad spectrum antimicrobials, specifically for use against E coli, Pseudomonas aeruginosa, methicilin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faecium and penicillin-resistant Streptococcus pneumoniae. More generally they are penicillin-resistant Streptococcus pneumoniae. More generally they are active against Gram-positive or -negative bacteria, fungi, yeast and proteococus for creatment of plant diseases. Compared with non-cyclised analogues (i.e. trachmplesin and protegrih type peptides), (I) and are more effective, also for tachyplesin and protegrih type peptides), (I) and are more effective, (i.e. tachyplesin and protegrih ty and/or serum half-life (increased resistance to proteolysis). They are more sultable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                   Loop region; cyclic peptide; antimicrobial; disinfectant; therapy; preservative; amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 32; DB 19;

This enzyme is an aminoacyl-tRNA synthetase (AARS). AARSs charge (acylate) specific tRNAS with amino acids for use in protein synthesis. Glutamyl-tRNA synthetase therefore charges an glutamyl-tRNA with glutamate. Since this enzyme has a crucial role in protein synthesis and therefore life, any agent that inhibits or disrupts protein synthesis is likely to be toxic. The present sequence could therefore be used as a basis for testing whether the encoded aminoacyl-tRNA synthetase is sensitive to known inhibitors or other chemicals and hence could be used in the discovery of potential herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

          Loop region; cyclic peptide; antimicrobial; disinfectant; therapy; preservative; amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Loop region; cyclic peptide; antimicrobial; disinfectant; therapy; preservative; amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 which has: (a) an amplipathic arti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological ph; and (c) at least one basic amino acid (aa) in LR or TR. (l) are broad spectrum antimicrobials, specifically for use against E. coli, Pseudomonas aeruginosa, methicillin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faccium and penicillin resistant Streptococcus pneumonale. More generally they are active against Gram-positive or -negative bacteria, fungi, yeast and protozoa. Apart from clinical uses, (l) are also used as disinfectants and preservatives for medical equipment, foods, cosmetics etc., also for treatment, of plant diseases. Compared with non-cyclised analogues (i.e.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tachyplesin and protegrin type peptides), (I) and are more effective, with better bloavallability and/or serum half-life (increased resistance to proteolysis). They are more suitable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is an example of a cyclic peptides (I) of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                      New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 13;

which has: (a) an amplipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological ph; and (c) at least one basic amino acid (aa) in LR or TR. (i) are broad spectrum antimicrobials, specifically for use against E. coli, Pseudomonas aeruginosa, methicillin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faectum and penicillin-resistant Streptococcus pneumoniae. More generally they are active against Gram-positive or -negative bacteria, fungi, yeast and protozoa. Apart from clinical uses, (1) are also used as disinfectants and preservatives for medical equipment, foods, cosmetics etc., also for treatment of plant diseases. Compared with non-cyclised analogues (1.e.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tachyplesin and protegrin type peptides), (I) and are more effective, with better bloavailability and/or serum half-life (increased resistance to proteolysis). They are more suitable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is an example of a cyclic peptides (I) of the invention,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           blocidal bacteria; yeast; Candida species; fungi; protozoa; Escherichia coli; Pseudomonas aeruginosa; infection; preservative; vancomyclin-resistant Entercoccus faecium; disinfectant; food; methicillin-resistant Streptococcus aureus; medical equipment; penicillin-resistant Streptococcus pneumoniae; cosmetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cyclic peptide; antimicrobial; amphiphilic beta-sheet; biostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

vancomycin-resistant Entercocous faccium, methicillin-resistant staphylococus aureus and penicillin-resistant Straphylococcus aureus and penicillin-resistant Straphylococcus aureus and penicillin-resistant Straphococcus aureus and penicillin-resistant Straphococcus pneumoniae. (A) are used to tract or prevent infections, in animals or plants, also as preservatives and disinfectants for medical equipment, foods, cosmetics, optionally as mixtures or in combination with other antimicrobials. Compensated with linear analogues, (I) are more effective with better bloavailability and/or serum half-life (better resistance to proteolysis, allowing lower doses and making them more suitable for oral delivery). Since (I) are structurally related to naturally occurring antimicrobial peptides, they are less likely to induce development of resistant strains.
                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes cyclic peptides (I): (i) comprising an amphiphilic anti-parallel beta-sheet region (A), a loop region (B) and a beta-turn (C): (ii) having net positive charge at physiological pH; and (iii) including at least one basic amino acid (aa) in (B) or (C). AAY09554 to AAX09683 and AAX17301 to AAX17385 represent specifically claimed cyclic peptides and peptide segments. (I) are broad-specitum antimicrobials (biostatic or biocidal), effective against bacteria, yeast (e.g. Candida species), fungi and protozoa. Particularly they are used to control Escherichia coli, pseudomonas aeruginosa.
                                                                                                                                                                                                                                                                                                         Antimicrobial cyclic peptides with amphiphilic beta-sheet region
                                                                                                                                                                                                                                                                                                                                                               Claim 11; Page 157; 167pp; English

The present invention describes cyclic peptides (I): (i) comprising an camphiphilic anti-parallel beta-sheet region (A), a loop region (B) and a beta-turn (C): (ii) having net positive charge at physiological pH; and (iii) including at least one basic amino acid (aa) in (B) or (C).

AAY09554 to AAY09683 and AAY1301 to AAY17385 represent specifically claimed cyclic peptides and peptide segments. (I) are broad-specitum attimicrobials (biostatic or biocidal), effective against bacteria, antimicrobials (biostatic or biocidal), effective against bacteria, artimicrobials (biostatic or biocidal), effective against bacteria, artimicrobials (biostatic or biocidal), effective against bacteria, are used to control Escherichia coli, pseudomonas aeruginosa, are used to control Escherichia coli, pseudomonas aeruginosa, are used to craed or prevent infections, in animals or spendomoniae. (A) are used to treat or prevent infections, in animals or pneumoniae. (A) are used to treat or prevent infections, in animals or pneumoniae. (A) are used to treat or prevent infections, in animals or foods, cosmetics, optionally as mixtures or in combination with other foods, cosmetics, allowing lower doses and making them more suitable for or proteolysis, allowing lower doses and making them more suitable for cocurring antimicrobial peptides, they are less likely to induce development of resistant strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                   Antimicrobial cyclic peptides with amphiphilic beta-sheet region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

Patent No. 5916872
GENERAL INFORMATION:
APPLICANT: Chang, Conway
APPLICANT: Chan, Jie
APPLICANT: Chen, Jie
TITLE OF INVENTION: CYCLIC PEPTIDES HAVING BROAD
TITLE OF INVENTION: SPECTRUM ANTIMICROBIAL ACTIVITY
Sequence 167, Application US/08685589A

Patent No. 5916872
GENERAL INFORMATION:
APPLICANT: Chang, Conway
APPLICANT: Gu, Leo
APPLICANT: Chen, Jie
TITLE JF INVENTION: CYCLIC PEPTIDES HAVING BROAD
TITLE JF INVENTION: SPECTRUM ANTIMICROBIAL ACTIVITY
NUMBER OF SEQUENCES: 222
                                                                                                                                                                                                                                                                                                                                                    MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/685,589A
FILING DATE: 24-JUL-1996
CLASSIFICATION: 530

Sequence 170, Application US/08685589A

Sequence 170, Application US/08685589A

Patent No. 5916872

BENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Chang, Conway

APPLICANT: Chang, Conway

TITLE OF INVENTION: SPECTRUM ANTIMICROBIAL ACTIVITY
NUMBER OF SEQUENCES: 222

CORRESPONDENCE ADDRESS:
ADDRESSEE: Penniae & Edmonds LLP

STREET: 1155 Avenue of the Americas
                                                                                                                                                                        COMPUTER TREADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: DE PC COMPUTER:
COPERATION SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATCHIN Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/685,589A
FILING DATE: 24-JUL-1996
CLASSIFICATION: 530

-A; Description: Arabidopsis thallana chromosome II BAC F12L6 genomic sequence.
A; Reference number: 214168
A; Reference number: 214168
A; Accession: T00547
A; Status: translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-328 <ROU>
A; Residues: 1-328 <ROU>

"Isolation and characterization of the glucose-6-phosphate
dehydrogenase encoding gene (ggdA) from Aspergillus niger.";
Mol. Gen. Genet. 247:229-239(1995).
HOLTALYTIC ACTIVITY: D-GLUCOSE 6-PHOSPHATE + NADP(+) = D-GLUCONO-
1- CATALYTIC ACTIVITY: D-GLUCOSE 6-PHOSPHATE PATHWAY.
1- PATHWAY: FIRSY STEE IN PENTOSE PHOSPHATE DEHYDROGENASE
1- SIMILARITY: BELONGS TO THE GLUCOSE-6-PHOSPHATE DEHYDROGENASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

J. Mol. Evol. 42:422-431(1996).
J. Mol. Evol. 42:422-431(1996).
FUNCTION: PARTICIPATES IN VARIOUS REDOX REACTIONS THROUGH THE FEVERSIBLE OXIDATION OF THE ACTIVE CENTER DITHIOL, TO A DISULFIDE. THE F FORM IS KNOWN TO ACTIVATE A NUMBER OF ENZYMES OF THE PROTOSYNTHETIC CARBON CYCLE.
FUNCTION TO CARBON CYCLE.
SUBCEBLUIAR LOCATION: CHLOROPLAST.
--- SIMILARITY: BELONGS TO THE THIOREDOXIN FAMILY. PLANT F-TYPE.

                                                                                                                                                                                                                                                                                                                                                                                                         οy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous system. The linear peptide preferably has the formula: (a) XI- XI6; (b); BXXBXXXXBBXXXXXXB; or (c) BXXXBXXXXBBXB, where: each of XI-XI6
                      This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the adsulphide bridge. The novel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonuclectides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.

are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must be Trp; each B is aa containing a side chain that includes a basic group; and each X is an aliphatic or aromatic aa. The linear peptide may be containing at least 1-form aa. Or a fragment containing at least 7 consecutive aa from (a)-(c) containing by at least 7 consecutive aa from (a)-(c) containing at least 7 consecutive aa from (a)-(c) peptides able to cross the BBB include protegrins, Antennapedia, peptides able to cross the BBB include protegrins, Antennapedia, contegories based on their structure: (i) peptides with alpha-helices, conscriptions and maganins; (ii) peptides with disulphide bond-linked conf. cercopins and maganins; (ii) peptides with disulphide bond-linked with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of contrained and protegories defined above: (a)-peptides for are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on tecpresents a synthetic linear peptide designed on peptides able to cross the BBB and is conjugated to a doxorubicin molecule by a succinate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzhelmer's or parkinson's diseases, depression, pain and meningitis, but also for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The new derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                   ó

development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The novel derivatives are used to deliver active gents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic mechanism, so can deliver active agents to cytoplasm and non-tivire and deliver active agents to cytoplasm and nucleus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Linear; protegrin; peptide antibiotic; beta-sheet; secondary structure; disulphide bridge; antibody; ribozyme; antitumour agent; antiviral; anti-inflammatory; mammal; cell membrane; passive transport; cytoplasm;
                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Derivatives of antibiotic peptides lacking disulfide bridges – used as carriers to deliver active agents into cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier for diagnosis or treatment of disorders localised in the central nervous for diagnosis or treatment of disorders localised in the central nervous construct the linear peptide preferably has the formula: (a) XI-XI6 are main acids (aa), of which 6-10 of them are hydrophobic and X must constant and aliphatic or aromatic aa. The linear peptide may be an aliphatic or aromatic aa. The linear peptide may be containing at least 7 consecutive aa from (a)-(c) containing the land/or L-form aa, or a fragment containing at least 5, preferably at least 7 consecutive aa from (a)-(c) eptides able to cross the BBB include protegrins, Antennapedia, ceffects and are termed peptide antibiotics. They fall into 3 main cercapins and maganins; (ii) peptides with alpha helices, categories based on their structure: (i) peptides with alpha helices, eg. g. protegrin, tachyplesins, defensins; (iii) peptides with major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of all into the peptide antibiotic categories defined above: (a)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the BBB and (c)-peptide are based on tenderson; and (c)-peptide are based on the BBB and is conjugated to a doxorubicin molecule by a succinate the BBB and is conjugated to a doxorubicin molecule by a succinate by a succin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzheimer's or Parkinson's diseases, depression, pain and meningitis, but also for studying drug behaviour in BBB models.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of linear peptides as vectors for active ingredients, useful for diagnosis and treatment of central nervous system diseases, can transport agents passively across the blood-brain barrier
                                      _note= "linked to doxorubicin via a succinate (-CO-(CH2)2-CO-) linker; optionally linked to benzylpenicillin by a glycoamide linker"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         90.0%; Score 45; DB 21; Length 18; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the against, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antibudour agents, fragments) and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
```

```
The specification describes a pharmaceutical composition, which comparises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the P-31ycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                   New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, contact as a broad spectrum of activity against microbial targets, contact as including gram-positive and gram-negative bacteria, yeast, fungl, including medical equipment, foodstuffe, cosmetty of materials, control including medical equipment, foodstuffs, cosmetics, contact lens including medicaments or other nutrient containing materials. It solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial can also be used for the prophylaxis or treatment of microbial keratitis, corneal ulcers, stomach ulcers associated with keratitis, corneal ulcers, stomach ulcers associated with ellocobacter pylori, sexually transmitted diseases, gram-negative thelicobacter pylori, sexually transmitted diseases, gram-negative cortianty tract infections, systemic candidiasis and oral mucositis. Urinsty tract infections, systemic candidiasis and oral mucositis. Chibiting multi-drug resistance, e.g. vancomylor resistant exhibiting multi-drug resistance, e.g. vancomylor resistant staphylococcus streptococcus pneumoniae and methicillin resistant Staphylococcus curl mg/Kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; retrovirus; HIV; human immunodeficiency virus; preservation; disinfection; prophylaxis; treatment; infection; disease; conjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; Helicobacter pylori; sexually transmitted disease; oral mucositis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the development of resistance to the anticancer agent, pusing the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly the p-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, produced by chemical synthesis, can be coupled easily to the agent, receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; gram-negative; hurus; mimmunodeficiency virus; preservation; disinfection; prophylaxis; treatment; infection; disease; conjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; gram-negative sepsis; endocarditis; pneumonia; biocidal; biostatic; respiratory infection; urinary tract infection; MRSA; protozoan; vancomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant Staphylococcus aureus; systemic candidiasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                         New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

It can be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcres, stomach ulcres associated with telicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant certains and methicillin resistant Staphylococcus aureus (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 to 1 mg/kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Including medical equipment, foodstuffs, cosmetics, contact lens controlling medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcers, stomench ulcers associated with elicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant Enterococcus pneumoniae and methicillin resistant Staphylococcus aureus (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in peptides are local B amino acids in length both animals and plants. The peptides are 16-18 amino acids in length, and are characterised by four invariant cys residues at positions 6, 8, and 15 and either (1) by a characteristic pattern of basic and 13 and 15 and either (1) by a characteristic pattern of pastions 6, 8, hydrophobic amino acids and/or (2) being isolatable from animal (e.g. hydrophobic amino acids nd/or (2) being isolated by hydrophobic or small amino acids. The cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced combinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acylation and/or C-terminal amidation or esterification, and can be in linear or cystine-bridged form. D-Amino can research sequence is a specific example of the protegrin The present sequence is a specific example of the protegrin per nallogues in which Cys(6, 8, 13, 15) have all been replaced by Ser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó

The present sequence is a specifically claimed example of a peptide, crecombinantly produced, corresponding to the generic formula:

A1-A2-A4-A4-A5-Cys-A7-Cys-A3-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

CC A1-A2-A4-A4-A5-Cys-A7-Cys-A14-Cys-A14-Cys-A16-(A17-A18)

CC A1 a basic amino acid; A2 and A14 = a small amino acid; A3, A7 and A14 = a hydrophobic amino acid; A5, A7 and A14 = a hydrophobic amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar, acid and A11 = a basic, hydrophobic, neutral/polar, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid. This has a charge of a neutral/polar, hydrophobic or small amino acid. This may be absent or a basic, neutral/polar, hydrophobic or small amino acid. This peptide and conferce constrince and its Netralinal acylated and acid confermable and animal acylated and acylaric acid. This peptide is in smake form where all the cysteine bridge. This peptide is in smake form where all the cysteine bridge. This peptide is in smake form where all the cysteine bridge. This peptide is in smake form where all the cysteine bridge are replaced by a hydrophobic, small or large polar cysteine bridge. This peptide is in smake form where all the preventing the cysteine bridge and are useful as anti-bacterial, anti-viral and agenty to pacteria and are useful as anti-bacterial, anti-viral and agenty or microbial or viral infection in plants by preventing the negative bacteria. The protegrins are particularly useful for the negative bacteria. The protegrins are particularly useful for the negative bacterial and animals be used in eye care solutions and physiological conditions (e.g. in the presence of serum) than certain physiological conditions (e.g. in the presence of serum) than certain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

Protegrin antiblotics form part of the peptide antiblotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the adsulphide bridge. The novel derivatives are used to deliver active agents to an organism. e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, and non-lytic but can cross mammalian cell membranes rapidly by a passive mechanism, so can deliver active agents to cytoplasm and nucleus, including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                             ő
                       This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the adualphide bridge. The novel derivatives are used to deliver active agents to an organism. e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antibudua agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.

By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly produced by chemical synthesis, can be coupled easily to the agent, produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in both animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. porcine) leukocytes; or analogues of these peptides in which 1-4 of the Cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by N-acylation and/or C-terminal amidation or esterification, and can be in linear or cystine-bridged form. D-Amino and researt.

This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The novel derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytostatic; neurodegenerative; antidepressant; analgesic; antimicrobial; blood-brain barrier; diagnostic; central nervous system; protegrin; Antennapedia; tachyplesin; peptide antibiotic; Alzheimer's disease; cancer; Parkinson's disease; depression; pain; meningitis.

The invention relates to the use of linear peptides, coupled to an active agent, to prepare a composition able the cross the blood-brain barrier of diagnosis or treatment of disorders localised in the central nervous for diagnosis or treatment of disorders localised in the central nervous composition are perfected by the composition of the communation of x1-X16 are amino acids (aa), of which 6-10 of them are hydrophobic and X6 must are amino acids (aa), of which 6-10 of them are hydrophobic and X1-X16 and each X is an aliphatic or aromatic aa. The linear peptide may be and each X is an aliphatic or aromatic aa. The linear peptide may be containing at least 7 consecutive as from (a)-(c) containing D- and/or L-form as, or a fragment retro forms of (a)-(c) containing D- and/or L-form as, or a fragment containing at least 5, preferably at least 7 consecutive as from (a)-(c). Peptides able to cross the BBB include protegrins, Antennapedia, categories based on their structure; (i) peptides with alpha-helices, categories based on their structure; (i) peptides with disulphide bond-linked eg. occropins and maganins; (ii) peptides with disulphide bond-linked beta-sheets, e.g. protegrin, tachyplesins, defensins; (iii) peptides with no major structure but containing bends due to the presence of with no major structure but containing bends due to the presence of all into the peptide antibiotic categories defined above: (a)-peptides are based on the Antennapedia family peptides; (b)-peptides are based on the BBB and sonjugated to a doxorubicin molecule by a succinate the BBB and is conjugated to a doxorubicin molecule by a succinate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conjugates of the linear peptides and the active agent are particularly used to treat, prevent or diagnose brain cancer, Alzhelmer's or parkinson's diseases, depression, pain and meningitis, but also for studying drug behaviour in BBB models.
                                                                                                                                                                                                                                                                                                               useful for
to benzylpenicillin by a glycoamide linker"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
